About me

I have knowledge in frontend and backend web development since 2020, I also share my knowledge with people from companies, educational institutions and communities on the Internet. I also collaborate on projects like Freelance FullStack. I'm more Frontend oriented, but I also do Backend.

I enjoy carrying out the layout and interactivity of web interfaces, as well as optimization, for the good positioning and loading performance of web sites and applications.

For more information follow the links in the contact section. 👆
